

Agustín Gabriel Bosso

I have experience as a web developer and product manager. I know very well the whole way from the idea of the client from the requirements gathering to the delivery and I can manage each of its steps. My goal is to work in a flexible company that grows and allows me to grow within it. Knowing that my effort directly affects the progress of my company is the way I measure my professional achievements.

Experience

Chief Product Owner
2017/08 → Now
Pagantis in Barcelona

Pagantis
Fintech - B2B2C ~100 
Paperless consumer lending

Pagantis offered me the opportunity to begin my management career and return to a company that is in the sweet spot of transition from startup to big business. A great opportunity to push to its best my talents and the experience gained in these years. My work at Pagantis consists of:

- Lead the Product Owners and UX teams synchronizing the activities of each team and ensuring the team focus towards the quarter goals
- Contribute to the company transition through the Agile Fluency both procedural and cultural.
- Work together with the finance team to build the business plan, extract from it the KPIs and build with the POs team the company's roadmap
- Have a global vision of the needs of the different merchants and customers to make delivery of functionalities that fit the needs in the broadest and most scalable way in the required time
- Contribute and help build the company's User Experience and User Research culture, also transitioning from a more UI-oriented vision to the global experience.
- During transition periods or for importante projects I took care of some teams as their PO, as: Customer experience team, Merchants API team and Payments methods Issuing and Acquiring team.

Some of my achievements have been:

- Build processes and procedures for product development. As a company, we have decided to be guided by *Martin Fowler's Agile Fluency model*, moving from HiPPO culture, with roadmaps in paper to a culture with data-based decisions, research, experimentation and goals planning by sprint and quarter with measurable impact on the KPIs of the company

BETTER DONE THAN PERFECT; VALIDATE EARLY AND YOU WILL NEVER NEED LUCK

- The procedures, where each team has defined its own based on an initial guideline, helped to improve the performance and predictability of the teams to the point of starting to deliver projects and functionalities systematically in a timely manner when previously this was little or rare.
- Lead the card issuance project as Mastercard Principal Member

Product Manager
2015/11 → 2017/07
Skyscanner in Barcelona

Travel - B2C ~500 
Flight and hotels metasearch

My duties and responsibilities as Product Manager at Skyscanner Hotels were:

- Take the role of Product Owner in Frontend and Backend squads in the Hotels section, later the Deals and Attachment squads, focused in discounts and internal acquisition respectively.
- Understanding the online and offline ecosystem of tourism and travel industry.
- Communicate to the development teams the goals and priorities, always aligned to the objectives of the company in general and hotels section in particular.
- Design and analyze features starting with the user through quant and qual data: Understand their behavior analyzing our funnels at the light of different types of user testings.
- Test those features using A/B testing or T testing, obtain and understand the metrics associated with the business. At the end, always to improve the user experience.
- Ensure the delivery of the product in a timely manner, provide the team with all the information concerning the business needs as clearly as possible.
- Collaborate with other POs and managers from other teams, products or verticals, same or different companies to facilitate the integration and the provision of services between different departments.
- Use of different methodologies and frameworks as Scrum, Kanban, Design Sprint, etc to deliver complex projects.

Product Manager
2010/03 → 2015/10
Zyncro in Barcelona

Social Networks - B2B ~40 
Intranet and multi-purpose social net framework

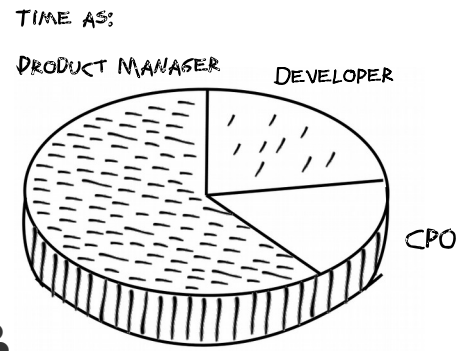

Some tasks I performed in this role are:

- Discuss and investigate with the sales team the features customers demand and need.
- Find solutions to problems seeking to optimize resources.
- Analyze features and write use cases (UML) or user stories (SCRUM).
- Communicate to the development team requirements and product roadmap.
- Advising partners and external developers on potential product integrations.

Some achievements in the fulfillment of my work have been:

- Concept and design of the plugin system that uses the product which has allowed, not only to add functionality created by others, but also customize the product with features asked by clients, giving the possibility to use the product as a framework and not just as a closed product.

- Design of multiple functionalities into the product that has been well reused in different projects.
- I have advised and accompanied international partners from Japan, France, Holland, Germany, Brazil, and Mexico in the development of their applications, customizations and put into production.

Web Developer

2009/10 → 2010/03

Zyncro in Argentina

Social Networks - B2B ~40 👤

Intranet and multi-purpose social net framework

My technical background and my curiosity and interest to understand how we sold the product opened the door to me to be the link between both worlds. I found it was easier to pass from the technical world to business than the inverse.

The tasks I performed, among others, were:

- Development of frontend modules using Zend Framework for PHP
- Development of corporate website using Magento.
- Implementation of connectors and services using REST and JSON.
- Development of visual elements and eyecandy using JQuery, jQueryUI and CSS3.

Java Developer

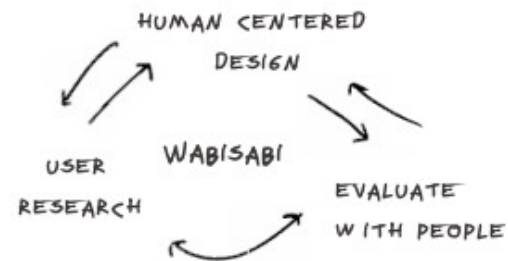

2009/06 → 2009/10

IntercomGi in Argentina

Consultancy - B2B ~80 👤

Automated SEO tool

My brief stint in the Java world taught me about different concepts of backends to which I was accustomed.

Some tasks that I made during that time:

- Creation of interfaces to connect the core product with the frontend.
- Optimizing access modules database.
- Development of the ROI per keyword calculation module for an automated SEO engine.

Web Developer

2007/06 → 2009/06

IntercomGi in Argentina

Consultancy - B2B ~80 👤

E-commerce websites

My first work experience taught me the terrible gap between the academic and professional worlds.

Some tasks in which I worked during those years:

- Laying out pages in HTML, CSS and Javascript using as a base the designs in Photoshop to accomplish a pixel-level filling with original design.
- Development of backends and frontends in PHP and MySQL.
- Development of plugins and extensions in the framework used in the company, eventually even changing the core of it to incorporate new and more

modern technologies.

➤ Management and communication with customers. Requirements gathering. Cooperation with providers and customers.
